PLANER 900W

This 900W planer with soft grip works fast and accurate with its large planing width of 82mm and a rotation speed of 16000min⁻¹. The planing depth can be set between 0 and 3mm. The user decides how much wood he wishes to take away.

The planer has three "V" grooves located in the front base to easily chamfer the edges of the workpiece. The "T" guide is used for planing along edges and can be mounted to either the left or right side of the planer. The "L" depth guide is used in conjunction with the "T" guide for rebating. The maximum rebate depth is 12.5mm made in several passes up to 2mm each time.

Another handy feature: the chip extraction can be directed at either side of the tool. This guarantees a clear view during planing.
